What we do

We grow with the needs of clients and also with the modern technology trends. Our technical team is well versed with many technologies and they always put special emphasis on process quality, documentations and security of the product or services.

Our support teams like 'HR', 'Purchase & Facilities', 'Administrations', 'Accounts' and 'Business Development' are constantly cooperating the technical team and assisting them with all of their needs and helping us to move forward towards our

Some samples for you

Let us demonstrate below some recent projects we have worked for our clients. The detailed case studies of the below works can be viewed at our site. We maintain client's confidentiality from every aspect - be it related to Intellectual properties or client's data/concept and so client's details are kept hidden. Lets have a look.

Web/Cloud apps development

We create applications which provide on-demand service, data security, storage and white labeling (if required) using the concept of cloud computing and to make it available always in internet, we use web service. So we work on combined SOA (service oriented architecture) which can be assumed to be a bundle of web service and cloud computing. Our working area is wide spread, starting from simple website design and development to big web application development at enterprise level. We work on Big Data and SaaS architecture as well. Please know more from <http://theetsindia.com/webapplication-development>

Web graphics and 2D or 3D model/render and animation

Web graphics design and 2D/3D designs may be of many types which cannot be described in short but we work with a belief that creativity and innovation are the source. A designer is one artist and his work should reflect beauty and creation. Here in Eclipse, we have dedicated graphics designer who are working on web and other graphical area. On the other hand we are working on motion graphics and animation as well including 3D modeling and rendering. To see some sample please check <https://www.youtube.com/theetsindia>

Enterprise application/ Custom ERP development

We study our client's existing business to identify their pain area and we provide IT consulting by creating required business architecture for them. We plan for development and implementation of that architecture in the form of an Enterprise software for several industry verticals and bring smile at their faces by providing them automation in business which in turn gives them high rise in productivity, business and revenues. Please have a look at <http://theetsindia.com/enterprise-solutions>

Trading platform

In today's world stocks/asset and commodities trading is very common and most of the traders and exchanges prefer to analyze, study and execute trading online. We create online trading platform for them which in turn help them in trading as a user or also as a trade executor or trade-broker. It displays runtime price of stocks in the form of chart and manages trading online. To know more please visit <http://theetsindia.com/trading-platform-development>

Android/iOS app development

We have dedicated department for mobile application development who are working with the web application team jointly to achieve our customer goals. All are having smartphone in his hand today and all wants mobility which means use of application on the move. We make their life smarter by creating app downloadable. User friendliness and simple UI is our key of application reputation. We make normal standalone app, online app, games and also enterprise mobility. Please check <http://theetsindia.com/mobile-application-development>

Internet Marketing

We make your business popular. We make branding and we create huge traffic to your business online which in turn maximizes your business. We have dedicated team of professionals in-house who are expert in this. For details please visit <http://theetsindia.com/lead-generation>

Game Development

We use our technical and graphic skill to create games for mobile and desktop which may run offline or online as well. We create games using HTML5 and Unity 2D/3D. To know more about our game domains please click on <http://theetsindia.com/game-development>

Quality Training and certification service

We believe quality training motivates you and your organization to run with some predefined set of rules which keeps discipline in your organization and that yields quality in your product and services which you provide to your customers. It inspires you to become different from other competitors of you in the market. Certification proves that you are aware of quality processes and that creates your brand and value to your customers. Please know more at <http://theetsindia.com/quality-and-certification>

Thank you
